

Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	2 July 2026
Team ID	
Project Name	AI-Powered Customer Support & Service Automation
Maximum Marks	4 Marks

Components & Technologies

S.N o	Component	Description	Technology
1	User Interface	Customer portal, agent workspace, manager dashboard, and admin interface for accessing the application.	Salesforce Lightning Experience (LWC), HTML5, CSS3, JavaScript
2	Application Logic-1	Customer registration, authentication, support ticket creation, and warranty request processing.	Salesforce Apex
3	Application Logic-2	Business automation for case assignment, approvals, notifications, and SLA management.	Salesforce Flow, Process Automation
4	Application Logic-3	AI-powered customer support, chatbot assistance, and case recommendations.	Salesforce Agentforce AI, Einstein AI
5	Database	Stores customer, product, warranty, and support case information.	Salesforce Objects (Standard & Custom Objects)
6	Cloud Database	Cloud-based CRM database with secure storage and high availability.	Salesforce Data Cloud
7	File Storage	Stores invoices, warranty documents, product images, and attachments.	Salesforce Files, Content Management
8	External API-1	Sends email notifications and integrates with external services.	REST API, Salesforce API

9	External API-2	Integrates with ERP, payment gateway, or third-party warranty systems.	REST API, SOAP API
10	Machine Learning Model	AI for case classification, intelligent routing, and customer assistance.	Salesforce Einstein AI, Agentforce AI
11	Infrastructure (Server / Cloud)	Cloud deployment, application hosting, security, and scalability.	Salesforce Platform (SaaS), Salesforce Cloud Infrastructure

Application Characteristics

S.N	Characteristics	Description	Technology
1	Open-Source Frameworks	Front-end and development technologies used for customization and integration.	Lightning Web Components (LWC), JavaScript, HTML5, CSS3
2	Security Implementations	Authentication, authorization, encryption, audit logging, role-based access, and secure APIs.	Salesforce Shield, Role-Based Access Control (RBAC), OAuth 2.0, SSL/TLS, Field-Level Security, Profiles & Permission Sets, Multi-Factor Authentication (MFA), Audit Trail

Technologies Used Summary

- **Frontend:** Salesforce Lightning Web Components (LWC), HTML5, CSS3, JavaScript
- **Backend:** Salesforce Apex
- **Automation:** Salesforce Flow, Approval Processes
- **AI:** Salesforce Agentforce AI, Einstein AI
- **Database:** Salesforce Objects, Data Cloud
- **Storage:** Salesforce Files
- **Integration:** REST API, SOAP API
- **Deployment:** Salesforce Cloud Platform
- **Security:** Salesforce Shield, OAuth 2.0, MFA, RBAC, Field-Level Security
